# Macmillan Mathematics 

Teacher's Book

Paul Broadbent \& Mary Ruddle

## Contents

| Page 4 | Introduction |  |
| :---: | :---: | :---: |
| Page 5 | Oral and mental starters |  |
| Block A | Understanding numbers | 7 |
| Unit 1 | Large numbers <br> 4- and 5-digit numbers <br> Thousands <br> Millions <br> Comparing and ordering <br> Rounding and approximation | 8 |
| Unit 2 | Number patterns <br> Counting <br> Counting in $10 \mathrm{~s}, 100 \mathrm{~s}$ and 1000 s <br> Sequences <br> Function machines <br> Patterns and relationships | 14 |
| Unit 3 | Multiples and factors <br> Multiples <br> Lowest common multiple <br> Factors <br> Highest common factor <br> Multiples and factors | 20 |
| Unit 4 | Assess and review Revision and assessment of Units 1, 2 and 3 | 26 |
| Block B | Addition and subtraction | 30 |
| Unit 5 | Addition and subtraction: revision <br> Mental addition <br> Mental subtraction Written addition: revision Written subtraction: revision Addition and subtraction problems | 31 |
| Unit 6 | Addition and subtraction <br> Adding 6-digit numbers <br> Adding millions <br> Subtracting 6-digit numbers <br> Subtracting millions <br> Addition and subtraction problems | 37 |

| Unit 7 | Adding and subtracting money <br> Converting units | $\mathbf{4 3}$ |
| :--- | :--- | :--- |
|  | Adding money <br> Giving change <br> Subtracting money <br> Money problems |  |
| Unit 8 | Assess and review <br> Revision and assessment of <br> Units 5, 6 and 7 | 49 |
| Block C | Geometry | G3 |
| Unit 9 | Angles and lines <br> Lines | $\mathbf{5 4}$ |
|  | Angles and degrees <br> Measuring angles <br> Drawing angles <br> Compass directions |  |
| Unit 10 | 2-D and 3-D shapes <br> Naming 3-D shapes <br> Properties of 3-D shapes <br> Polygons <br> Quadriaterals <br> Drawing quadrilaterals | $\mathbf{6 0}$ |
| Unit 11 | Problem-solving and geometry <br> Symmetry <br> Reflections <br> Triangles <br> Drawing triangles <br> Shape patterns | $\mathbf{6 6}$ |
| Unit 12 | Assess and review <br> Revision and assessment of <br> Units 9, 10 and 11 | $\mathbf{7 2}$ |
|  |  |  |

| Block D | Multiplication and division | 76 |
| :---: | :---: | :---: |
| Unit 13 | Multiplication <br> Multiplying 4-digit numbers <br> by a single digit <br> Multiplying by tens <br> Multiplying 2-digit by 2-digit numbers <br> Multiplying 3-digit by 2-digit numbers Calculator patterns | 77 |
| Unit 14 | Division <br> Rules of divisibility Dividing numbers to 999: no remainders Dividing 2-digit numbers with remainders Dividing 3-digit numbers with remainders Dividing by multiples of 10 | 83 |
| Unit 15 | The four operations Inverse relationships: addition and subtraction Inverse relationships: multiplication and division Open sentences Brackets Number problems | 89 |
| Unit 16 | Assess and review Revision and assessment of Units 13,14 and 15 | 95 |
| Block E | Fractions and decimals | 99 |
| Unit 17 | Fractions and mixed numbers <br> Proper and improper fractions <br> Mixed numbers <br> Equivalent fractions <br> Simplifying fractions <br> Fractions of amounts | 100 |
| Unit 18 | Comparing and ordering fractions Comparing fractions Common denominators | 106 |

|  | Ordering fractions Adding unlike fractions Subtracting unlike fractions |  |
| :---: | :---: | :---: |
| Unit 19 | Decimal fractions <br> Tenths <br> Mixed numbers and decimals Tenths and hundredths $\times$ and $\div$ by 10 and 100 Fractions and decimals | 112 |
| Unit 20 | Assess and review Revision and assessment of Units 17, 18 and 19 | 118 |
| Block F | Measures and data | 122 |
| Unit 21 | Standard units of measure <br> Centimetres and metres <br> Estimating and rounding length Kilometres <br> Weight and capacity <br> Time: a.m. and p.m. | 123 |
| Unit 22 | Measures problems <br> Addition and subtraction of length Addition and subtraction: litres Addition and subtraction of weight Area and perimeter of rectangles Area and perimeter of compound shapes | 129 |
| Unit 23 | Handling data and probability <br> Constructing bar graphs <br> Frequency graphs <br> Interpreting graphs <br> Probability <br> Probability experiments | 135 |
| Unit 24 | Assess and review Revision and assessment of Units 21, 22 and 23 | 141 |

## Introduction

Macmillan Mathematics is a complete mathematics scheme for pupils from Grades 1 to 6 . It is wide-ranging and written not only to develop a thorough understanding of mathematics, but also to try to foster interest, enthusiasm and confidence in mathematics. It has a thorough mathematical structure, and careful progression and development to ensure continuity and curriculum coverage.

## Components

- The Teacher's Book gives clear guidance on planning, practical activities and the use of the pupil material for each unit of work.
- The Pupil's Book provides a clear explanation of the key steps needed to learn specific skills and concepts, as well as practice, reinforcement and enrichment activities to consolidate these skills and concepts.
- The Pupil's CD-ROM provides further reinforcement and assessment of the skills and concepts developed within each unit, with the provision of interactive exercises.

## Planning and organisation

For each year group, the curriculum has been organised into six blocks of work that are progressed over the year. Each block is organised into four teaching units that each covers a week of lessons. Within each unit is contained the set of objectives that guide planning, teaching and students' learning. These blocks support an extended period of learning when students' progress can be assessed and those students who are not keeping up with their peers can receive the additional attention and support they need. The fourth unit in each block is an 'assess and review' unit, allowing teachers to assess and monitor students' progress, and use and apply the skills and concepts learnt in the previous three units.

## Teaching sequence

## Term 1

| September | October | November |  |
| :---: | :---: | :---: | :---: |
| December |  |  |  |
| Block A | Block B | Block C |  |

Term 2

| January | February |  | March | April |
| :---: | :---: | :---: | :---: | :---: |
| May |  |  |  |  |
| Block D | Block E | Block F |  |  |

## Successful teaching and learning with Macmillan Mathematics

Macmillan Mathematics is intended to be used in the context of quality first teaching, with activities to support the teacher in their efforts to develop pupils' learning, confidence and love of mathematics. The authors give these principles to outline their thoughts on teaching and learning mathematics:
1 Plan and provide a balanced, practical experience that incorporates the acquisition, consolidation and application of knowledge and skills, with opportunities to use and extend thinking and reasoning.
2 Model ways to explore mathematics and look for patterns, rules and properties; direct their learning by providing examples that enable them to identify appropriate methods and understand rules and ideas.
3 Give pupils the opportunity to consolidate their learning, with frequent and regular periods of practice that are short, sharp and focused.
4 Ensure that pupils recognise how their learning builds on previous learning and help them to see connections; ensure that they feel appropriately supported and challenged by the work they are given.
5 Engage with pupils' thinking; give them sufficient time for discussion and time to think about their ideas and methods with prompting and probing questions.
6 Demonstrate the correct use of mathematical vocabulary and the interpretation and use of symbols, images, diagrams and models as tools to support their mathematical thinking and communication.
7 Share the excitement of mathematics, capturing pupils' imagination by teaching creatively and with enthusiasm.

## Structure of Teacher's Book

Objectives: The objectives from the syllabus covered by this unit.
Vocabulary: The key words to use and develop with pupils. List these on the wall or board for the pupils to read.
Lessons: The focus for each lesson. Share these with your pupils at the start of each lesson.
Oral and mental starters: Suggested starter activities for the first 5 minutes of each lesson (see below).
Resources: Practical resource suggestions to help support the teaching and learning of this unit.
Prior learning: The step before this unit of work. Use this as a basis for some questions at the start of the unit to assess the pupils' prior knowledge and understanding.

Background notes: Linking theory with practice, this briefly outlines some common difficulties and misconceptions for this unit of work and gives key teaching points.

Supporting the topic: Lists possible suggestions for using and applying the mathematics in real-life situations.
End of unit evaluation: Learning outcomes for this unit of work, with key area of assessment linked to the objectives.

This unit overview is followed by lesson notes containing practical activities and references to the Pupil's Book.

## Oral and mental starters

These are suggestions for whole-class mental maths activities for the first 5 or 10 minutes of each lesson. They are interactive and lively oral activities, with questions, games and practical activities that actively involve the pupils. They enable pupils to become confident and agile with mental calculation and number, as well as consolidating work done on shape, measures and handling data. The starters have a number of purposes.

- They can prepare the pupils for the unit of work ahead, rehearsing and sharpening skills. For example, for a unit on fractions of amounts you may plan mental starters on division facts to support their understanding.
- They can be used as a method of 'keeping sharp' the skills and concepts introduced in previous units. For example, an oral starter on names and properties of 2-D shapes, four weeks after teaching shape, will remind them of that teaching and consolidate their learning.
- They reinforce the importance of the language of mathematics, with regular re-visiting of vocabulary.
- They allow you to quickly assess pupils' knowledge and understanding of an area you intend to teach in the main part of the lesson. For example, before teaching subtraction of 2-digit numbers, you could ask oral questions on adding tens to check pupils' understanding.
Basic resources such as number cards, counters and number lines are important. Once you have used some of the activities, refine and develop them and plan your own starters to support your teaching.
Hands up (reading and writing numbers to 99999): Write 8 numbers on the board, using a mixture of numerals or words. Ask a pupil to point to a given number. Ask the class to raise their hands if they agree. Now ask each pupil to write a given number on paper then hold it up. Repeat both activities with other numbers. Include decimals after Unit 19.
Start here (counting to 99999 999): Ask the class to count on from and back to different starting numbers, e.g. start at 460387 and count to 460405 . Include decimals after Unit 19.

Steps (multiples and sequences): Ask the class to count on and back from a given number in multiples (e.g. in $2 \mathrm{~s}, 3 \mathrm{~s}, 4 \mathrm{~s}, 5 \mathrm{~s}, 6 \mathrm{~s}, 7 \mathrm{~s}, 8 \mathrm{~s}, 9 \mathrm{~s}, 10 \mathrm{~s}, 20 \mathrm{~s}, 25 \mathrm{~s}, 50 \mathrm{~s}, 60 \mathrm{~s}, 100 \mathrm{~s}, 1000 \mathrm{~s}, 10000 \mathrm{~s}, 100000 \mathrm{~s})$.

What's the order? (ordering numbers to 99999 999): Write a random set of numbers on the board. Explain that the numbers need to be put in order, starting with the smallest. Ask 'Which should come first?' etc. and write in the order suggested. Ask 'Is this correct?' Alter if needed. Include decimals after Unit 19.
Arrows away (place value to $\mathbf{9 9} 999$ 999): You need a large set of 'arrow cards' as shown in Pupil's Book 4A page 4, numbered $0-9$, in tens $10-90$, in hundreds $100-900$, in thousands $1000-9000$, in ten thousands $10000-90000$, in hundred thousands $100000-900000$, in millions $1000000-9000000$, in ten millions 10000 000-90000000. The arrows must match exactly and the unit cards must fit over the 0 of the tens, the tens over the 00 of the hundreds etc. Show a number using the arrow cards, e.g. 63479. 'What is this number?' 'What does the 6 mean?' Move the bottom arrow card to reveal 60000 on the card. Replace the card then ask 'What does the 7 mean?' Move the top card to reveal 70 . Repeat with the other digits.
What's the rule? (number sequences): Write a sequence on the board, e.g. $3,8,13,18, \ldots$; $8436750,8436720,8436690,8436660, \ldots$ Ask pupils to work out the rule (e.g. the numbers go up in steps of 5 ; down in steps of 30 ). Ask the class to say the sequence together and continue until you stop them. Include decimals after Unit 19.
Double it (doubling numbers): Give a few numbers to double, ask the class, then individuals. Repeat several times. Include 2- and 3-digit numbers, and decimals after Unit 19.
Just a fraction (fractions of whole numbers): Give multiples of numbers for pupils to find a given fraction, e.g. multiples of 10 to find $\frac{7}{10}$, multiples of 4 to find $\frac{3}{4}$, multiples of 3 to find $\frac{2}{3}$ etc.
Equal parts (equivalent fractions): Write a fraction or mixed number on the board. Ask pupils to suggest equivalent fractions. Include decimal fraction equivalents to common fractions after Unit 19.
Ordering parts (ordering fractions): Write 4 proper fractions, improper fractions or mixed numbers on the board. Ask 'Which is the smallest, the next smallest?' etc. 'How do you know?' until they are in order.
Language (understanding mathematical language): Give instructions or ask questions involving mathematical terms such as multiply, divide, product, factor, multiple, common multiple, lowest common multiple, common factor, highest common factor, plus, sum, subtract, difference, equivalent fraction, lowest terms, improper fraction, mixed number, decimal fraction etc. For example 'What is the product of 7 and 5?; What is the sum of 37 and 25 ? Is 3 a factor of 32 ?; Give me the lowest common multiple of 4 and 6 ' etc. Flash facts (addition, subtraction, multiplication or division facts): Ask addition, subtraction, multiplication or division fact questions (e.g. $8+7,13-6,7 \times 8,42 \div 6$ ) for pupils to answer as a class, or by each holding up a number card when you give a signal. Reduce the time before your signal as confidence increases.
Pairs (addition or multiplication facts): Give a number, e.g. 65. Pupils choose 2 numbers which when added have that total. They could hold up number cards or give answers orally. Give another number, e.g. 36. Pupils show 2 numbers which make the number when multiplied.
My way (adding and subtracting 2-digit numbers mentally): Write a 2-digit calculation on the board for pupils to work out mentally. Ask for the answer and how they worked it out. Record the method, e.g. for $26+35^{\prime} \mathrm{I}$ added 26 and 30 which is 56 ' (record $26+30=56$ ) then I added 5 more to 61 ' (record $56+5=61$ ). Include decimals after Unit 19.
Name it (2-D and 3-D shapes): Describe shapes using mathematical properties, e.g. A shape has 3 faces, 2 faces are circles, it can roll. A 2-D shape has 8 sides all the same length. Name the shape from its description. What's the question? (using and developing knowledge of relationships in number): Provide a number, e.g. 48. 'The answer is 48 , what's the question?' Pupils give number statements which have 48 as the answer, e.g. $16 \times 3,35+13,100-52,96 \div 2$, etc. Use whole numbers, fractions or decimals, as appropriate.
In time: Set the teaching clock to a time. Ask pupils to give both the analogue and digital form (e.g. twenty-five past $10 ; 10: 25$ ). Ask questions such as 'What time will it be in $2 \frac{1}{2}$ hours? What time was it $3 \frac{1}{4}$ hours earlier?' What's my number?: Ask questions such as 'I'm thinking of a number. When I add 26 to it the answer is 61 . What's my number?' Invite pupils to make up similar questions.

## Pupil's Book 4A

## Block A Understanding numbers

| Maths Topic | National Standards from Government Guidelines |  |
| :---: | :---: | :---: |
| Unit | Curriculum area | End of year objectives / success criteria |
| 1 Large numbers | Understanding numbers, methods of representing them and the relations between them | - Extend the range and recognition of whole numbers up to 9 digits. <br> - Distinguish between place value and the value of a digit in a number <br> - Read, say and write whole numbers with up to 9 digits in symbols and words <br> - Arrange, compare and order a set of numbers, with up to 9 digits, and represent them on a number line <br> - Approximate to the nearest $10,100,1000, \ldots$, 100000. |
| 2 Number patterns | Understanding, and recognising number patterns, relations and functions | - Use tables, drawings, models and rules to express mathematical relationships <br> - Complete number patterns. <br> - Deduce a group of generalisations, from observing models and relationships. <br> - Deduce generalisations from observation of some number patterns and express them by different methods. <br> - Use the calculator to discover and form number patterns. |
| 3 Multiples and factors | Understanding numbers, methods of representing them and the relations between them <br> Understanding operations on numbers and the relations between them | - Express a number in terms of its factors. <br> - Recognise prime and composite numbers. <br> - Understand the meaning of divisibility. <br> - Factorise natural numbers to 100 into their factors. <br> - Express natural numbers as prime factors. <br> - Find the HCF and LCM of two or more numbers. |
| 4 Assess and review | Revision and assessment of previous 3 units - problems, formative and summative assessment. <br> Activities to monitor, assess, evaluate and consolidate children's knowledge and understanding. |  |

During this block of work, pupils will experience:
1 Revision of previous work on reading, writing, comparing, ordering, rounding and understanding place value in 4-and 5-digit numbers.
2 Reading, writing, comparing, ordering, rounding, approximating and understanding place value in 6 -, 7 - and 8 -digit numbers.

## Unit 1 Large numbers

| Term 1 Block A | Objectives |
| :---: | :---: |
| Numbers and addition | At the end of the unit, students should be able to... |
| Unit 1 Large numbers | - Extend the range and recognition of whole numbers up to 9 digits. |
| Unit 2 Number patterns | - Distinguish between place value and the value of a digit in a |
| Unit 3 Multiples and factors | number. |
| Unit 4 Assess and review | - Read, say and write whole numbers with up to 9 digits in symbols and words. <br> - Arrange, compare and order a set of numbers, with up to 9 digits, and represent them on a number line. <br> - Approximate to the nearest $10,100,1000, \ldots, 100000$. |
| Vocabulary | Lesson |
| units, tens, hundreds, thousands, | 14 - and 5-digit numbers |
| ten thousands, hundred thousands, | 2 Thousands |
| millions, ten millions, hundred millions, | 3 Millions |
| digit, place value, numeral, round, | 4 Comparing and ordering |
| approximate, estimate, greater than, | 5 Rounding and approximation |
| less than, abacus, arrow cards, area, kilowatt hours, square kilometres |  |

## Oral and mental starters

Hands up
Arrows away
Hold up
What's the order?

## Resources

A large set of arrow cards, abacus, calculators, current information available about the population of world cities, e.g. reference books or internet
Pupil's Book pages 4-13

## Background notes

Pupils need to have a firm understanding of place value when working with large numbers. The use of materials such as an abacus and arrow cards (as shown on Pupil's Book 4A page 4) is very helpful in the development and reinforcement of the concept of place value. This unit revises and develops work covered in Grade 3.

## End of unit evaluation

Check that the pupils are able to:
1 Identify the place value of each digit in any number to 99999999.
2 Read, write, compare, order and approximate any number to 99999999.

## Supporting the topic

Discuss real-life examples of numbers to 99999999 , e.g. population of countries, government expenditure, statistics giving annual profits of large companies, approximations of large numbers found in the media etc.
Provide opportunities for pupils to visualise and estimate large quantities, e.g. the number of bricks in a large building, the number of letters in a book.

## Lesson 1 4- and 5-digit numbers

## Pupil's Book pages 4 and 5 Oral and mental starter: Hands up (numbers to 99 999)

## Activities

- Revise the meaning of digit and place value.

Establish that place value means the value of the digits in a number, depending on their position.

- Hold up some 3-, 4- and 5-digit numbers using a large set of arrow cards. Each time ask pupils to read the number together, then ask volunteers to give the place value of particular digits. Each time reveal the whole card for that digit to confirm its place value.
- Using the numbers on the board from the oral and mental starter, ask volunteers to indicate the digit which shows the number of hundreds; units; thousands; tens; ten thousands. Vary the order of the digits each time.
- Show some 4-and 5-digit numbers on an abacus and ask pupils to say the number together.
- Look at page 4 and go through the introduction with the class.

## Answers

e) 29467
f) 73019
g) 19337
h) 46905
i) 10509

Try this
5, 50, 500, 5000, 50000, 41000, 40 100, 40010, 40 001, 4100, 4010, 4001, 410, 401, 41, 32000, 30200, 30020, 30002, 3200, 3020, 3002, 320, 302, 32, 23000, 20300, 20030, 20003, 2300, 2030, 2003, 230, 203, 23, 14000, 10400, 10040, 10004, 1400, 1040, 1004, 140, 104, 14

## Lesson 2 Thousands

Pupil's Book pages 6 and 7 Oral and mental starter: Arrows away (numbers to 99999)

## Activities

- Show any 5 -digit number on the arrow cards and ask the class to read it together. Ask for the place value of each digit in order, starting with the units. Place a hundred thousand card behind the arrow cards, e.g. 400000 , and ask whether anyone knows its place value. Show the card to the class and emphasise that it is (4) hundred thousand. Ask the class to read the 6 -digit number.
- Show 6-digit numbers to the class, ask them to read the numbers, then ask for the place value of different digits. Each time show the full card for that digit to reinforce its place value, paying particular attention to the hundred thousands.
- Go through the introduction on page 6 with the class. Explain the pattern of 'hundreds, tens, units' beneath the two main headings (thousands and ones), and how the headings are used when reading the number. Draw the place value chart
on the board and write 362305 at the side. Ask volunteers to indicate where each digit should go on the chart as you record them. Read the number with the class, indicating how the headings are used as you do so. Repeat.

Answers

1 | THOUSANDS |  |  | ONES |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
| hundreds | tens | units | hundreds | tens | units |
|  | 6 | 5 | 2 | 4 | 5 |
| 1 | 0 | 0 | 1 | 8 | 0 |

## Try this

a) 180362 kWh
b) 334965 kWh

## Lesson 3 Millions

## Pupil's Book pages 8 and 9 Oral and mental starter: Hold up (numbers to 999 999)

## Activities

- Show a 6-digit number using the large set of arrow cards. Ask the class to say the number, then the place value of each digit. Hold up the 1000000 card and ask whether anyone knows the number. Establish that it is one million. Put the card behind the arrow cards and read the whole 7-digit number.
Look at page 8 and go through the introduction with the class. Point out that 'hundreds, tens, ones' appears under each of the three headings and how they are used when reading the number.
- Say a 7-digit number and then write it in figures on the board. Repeat with a few more 7-digit numbers, asking volunteers to write each in figures.
- Ask the class to read the numbers in question 1.

## Answers

1 a) 7400925
b) 9118079
c) 2400000
d) 13290591
e) 20400214
f) 12001390
g) 140002008
h) 127400270

2 a) four million seven hundred and eighty-five thousand one hundred and forty-one
b) one million five hundred and thirteen thousand nine hundred and thirty
c) four million six hundred and ninety thousand and eightyone
d) six million two hundred and forty-three thousand two hundred and twenty-five
e) three million nine hundred and twelve thousand one hundred and ninety-eight
f) five million six thousand seven hundred and two
3 a) 1967929
b) 4228082
c) 3393880
d) 55501257
e) 11100920
f) 88284166

## Try this

Discuss how each task could be calculated.

## Lesson 4 Comparing and ordering

Pupil's Book pages 10 and 11 Oral and mental starter: What's the order? (include millions)

## Activities

- Write two 7-digit numbers on the board such as 1829630 and 2184206 and ask the class to read each number together. Ask 'Which is the larger number? How do you know?' Establish that the number with the largest millions digit is the larger. Write another 7-digit number on the board, ask the class to read it, then compare whether it is larger or smaller than each of the other two numbers.
- Revise the meaning of the greater than ( $>$ ) and less than ( $<$ ) signs. Write the three numbers on the board in order, starting with the smallest, using the < sign between each. Read the statement with the class. Order the numbers again, starting with the largest and using the $>$ sign. Read the statement together.
- Look at page 10 and go through the introduction with the class. Emphasise that any 7-digit number
is greater than a 6-digit number and ask a volunteer to explain why.

## Answers

1 Check numbers are joined to lines correctly.
2 a) $493751<610028<4901122$
b) $3912249<3934007<7400321$
c) $380956<14321111<514090012$

f) $56023450>7129028>3193444$
g) $53291001>19921803>6490212$
h) $119842994>1198491>1198409$

3 Tokyo 35521740, Mexico City 22843550, New York 22310740, Seoul 21735390, Mumbai 19463950, Shanghai 16708510, Manila 16608340, Cairo 15837460 ,
Moscow 14432 190, London 12412330

## Try this

Check the populations are in size order.

## Lesson 5 Rounding and approximation

## Pupil's Book pages 12 and 13 Oral and mental starter: Arrows away (millions)

## Activities

- Go through the introduction on page 12 and explain that if the digit to the right of the significant digit is 5 or more, the number is rounded up, if it is less than 5 the number is rounded down, e.g. 343565 is rounded up to the nearest 1000 because the hundreds digit is 5 , but rounded down to the nearest 10000 because the thousands digit is 3 .
- Ask 'Which is the largest number that can be rounded down to 1000 ? Which is the smallest number that can be rounded up to 1000 ?' Record the numbers and establish why they are correct. Repeat with other rounding targets, e.g. 90000.

## Answers

1 a) $41700,29800,60200,29100,845200,628500$, 745800,294300
b) $42000,30000,60000,29000,845000,629000$, 746000,294000
c) $40000,30000,60000,30000,850000,630000$, 750000,290000

2 a) smallest 14500 , largest 15499
b) smallest 2750000 , largest 2849999
c) smallest 16195000 , largest 16204999
d) smallest 895000 , largest 904999
$3406000 \mathrm{~km}, 363000 \mathrm{~km}, 11000 \mathrm{~km}, 40000 \mathrm{~km}$

## Assessment

1 Great Britain 2 New Guinea

| 3 Islands in size order | 4 Rounded to nearest 1000 |  |
| :--- | :--- | :--- |
| Greenland | 2175600 | 2176000 |
| New Guinea | 785753 | 786000 |
| Borneo | 748168 | 748000 |
| Madagascar | 587713 | 588000 |
| Baffin Island | 503944 | 504000 |
| Sumatra | 443065 | 443000 |
| Honshu | 227413 | 227000 |
| Great Britain 218077 | 218000 |  |

## Try this

997740 km, 997700 km, 998000 km, 1000000 km, 1000000 km
